GLOBAL TRADE INVEST LIMITED · WEBSITE LEGAL

Cookie & Browser Storage Policy

Public Website | Version PRE-LAUNCH | Effective: Controlled working copy

This public legal document forms part of the corporate and website documentation of GLOBAL FIX BOND. Programme-specific Transaction Documents are provided separately to admitted prospective and actual investors through authorised channels or the secure Investor Portal.

1. Purpose and scope

This Cookie & Browser Storage Policy explains how the public GLOBAL FIX BOND website and Investor Portal use cookies and similar storage or access technologies, including local storage and comparable browser mechanisms. It should be read together with the Privacy & Data Protection Notice.

2. Current approach

The current website is designed to operate without behavioural advertising cookies. We do not currently require advertising trackers or third-party marketing profiles in order to access the public website or Investor Portal.

Storage technologies are used primarily for authentication, security, session management and user-interface preferences.

3. Strictly necessary authentication and session technologies

The Investor Portal uses authentication and session technologies necessary to support invitation-only account activation, password setup, authenticated sessions, sign-in, sign-out and multi-factor authentication. Blocking these technologies may prevent secure Portal access or account activation from working.

Authentication technologies may also support renewed authentication before sensitive actions, session invalidation and automatic sign-out.

4. Security and integrity technologies

Limited technical information may be stored or accessed where necessary to protect accounts, prevent abuse, maintain service integrity, investigate suspicious activity or defend against attacks. This may include session identifiers or equivalent security-state values.

These technologies are not used by us to build behavioural advertising profiles.

5. Language, theme and functional preferences

The website may remember English/German language, light/dark appearance and similar user-interface preferences in local storage, cookies or comparable browser mechanisms.

Where permitted by applicable law, low-intrusion functional storage may be used to provide a feature requested by the user or remember a choice. Transparency requirements continue to apply.

6. Analytics and advertising

The public website uses Vercel Web Analytics and Vercel Speed Insights for first-party aggregate traffic and real-user performance measurement. These tools are configured only on public routes and are not mounted on Investor Portal, Administration, Partner Workspace, authentication or login routes. Vercel describes Web Analytics as cookie-free and request-hash based rather than cross-site tracking; the request-derived identification hash is discarded after 24 hours.

We do not use these tools to create cross-site advertising profiles or to identify individual investors. If materially different optional analytics, advertising, session-replay or cross-site tracking technologies are introduced, we will assess the applicable legal basis and consent requirements, update this policy and provide any required preference mechanism before use.

7. Third-party infrastructure

Hosting, authentication, cloud, security, email and other technology providers may receive limited technical information necessary to provide their services. Their systems may use first-party or service-related technologies required for hosting, authentication, security or delivery.

Independent providers may process information under their own contractual and privacy arrangements.

8. Duration and browser controls

Some technologies last only for a browser session; others may remain for a defined period or until removed. Authentication sessions may expire, be invalidated by sign-out or security controls, or be renewed subject to authentication rules. Preference settings may remain longer.

Most browsers allow users to view, block or delete cookies and site storage. Blocking strictly necessary authentication or security technologies may prevent login, MFA, document access or other Portal functionality.

9. Consent and data-protection relationship

Where a storage technology requires consent under applicable law, we will provide an appropriate choice before or when the technology is used. Technologies that are strictly necessary for a service expressly requested by the user may not require consent, although transparency remains important.

Information obtained through storage technologies may constitute personal data and is then also governed by the Privacy & Data Protection Notice and applicable data-protection law.

10. Changes and contact

We may update this policy if our website, Portal, providers or legal requirements change. The current version and effective date will be published here.

Questions about cookies, browser storage or privacy may be sent to privacy@globalfix.bond.
